

Daily Task Assignments on Media and Hyperlinks and Layout in html

Task1:

Multimedia:

Multimedia is the integration of multiple forms of media, such as text, images, audio, video, animations, and graphics, to present information in an engaging and interactive way. It is widely used in education, entertainment, business, communication, and advertising to improve understanding and user experience.

Elements of Multimedia

1. **Text** – Used to provide information, titles, and descriptions.
2. **Images** – Enhance visual appeal and help explain concepts.
3. **Audio** – Includes music, narration, and sound effects.
4. **Video** – Combines moving images and sound to demonstrate ideas or tell stories.
5. **Animation** – Creates the illusion of movement to explain processes or entertain users.
6. **Graphics** – Includes diagrams, icons, charts, and illustrations for better visualization.

Types of Multimedia

1.Linear Multimedia: Plays from beginning to end without user interaction (e.g., movies).

2.Non-linear Multimedia: Allows users to interact and control the content (e.g., websites, games, e-learning applications).

Advantages of Multimedia

- Makes learning more interesting and interactive.
- Improves understanding through visual and audio elements.
- Increases user engagement and retention.
- Supports effective communication and presentations.
- Can be accessed through computers, smartphones, and the internet.

Disadvantages of Multimedia

- Can be expensive to create and maintain.
- Requires appropriate hardware and software.
- Large multimedia files consume more storage and bandwidth.
- Development can be time-consuming.

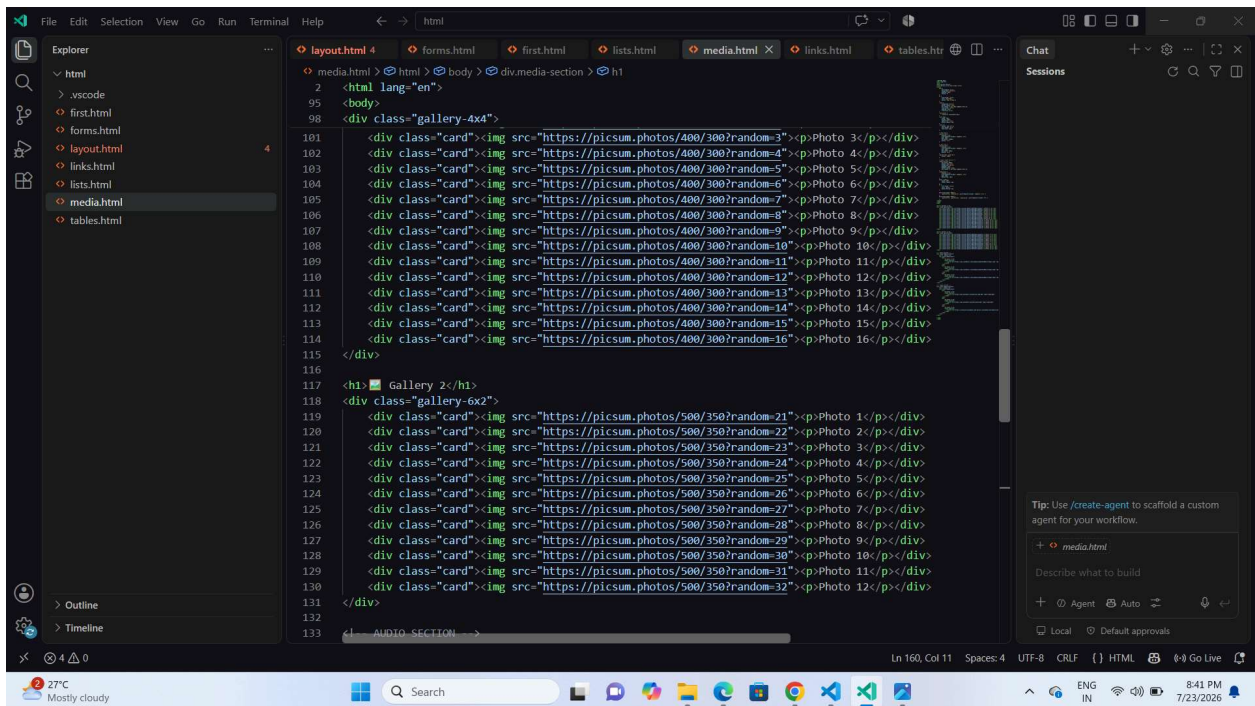

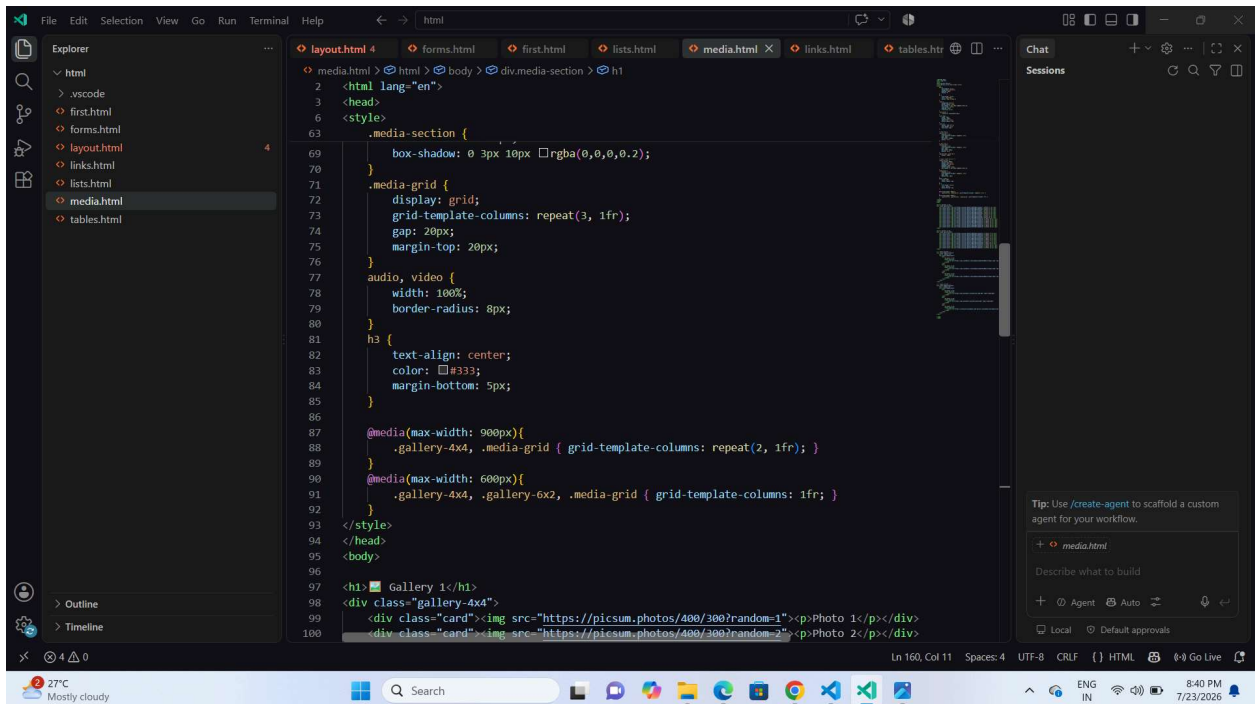

Conclusion

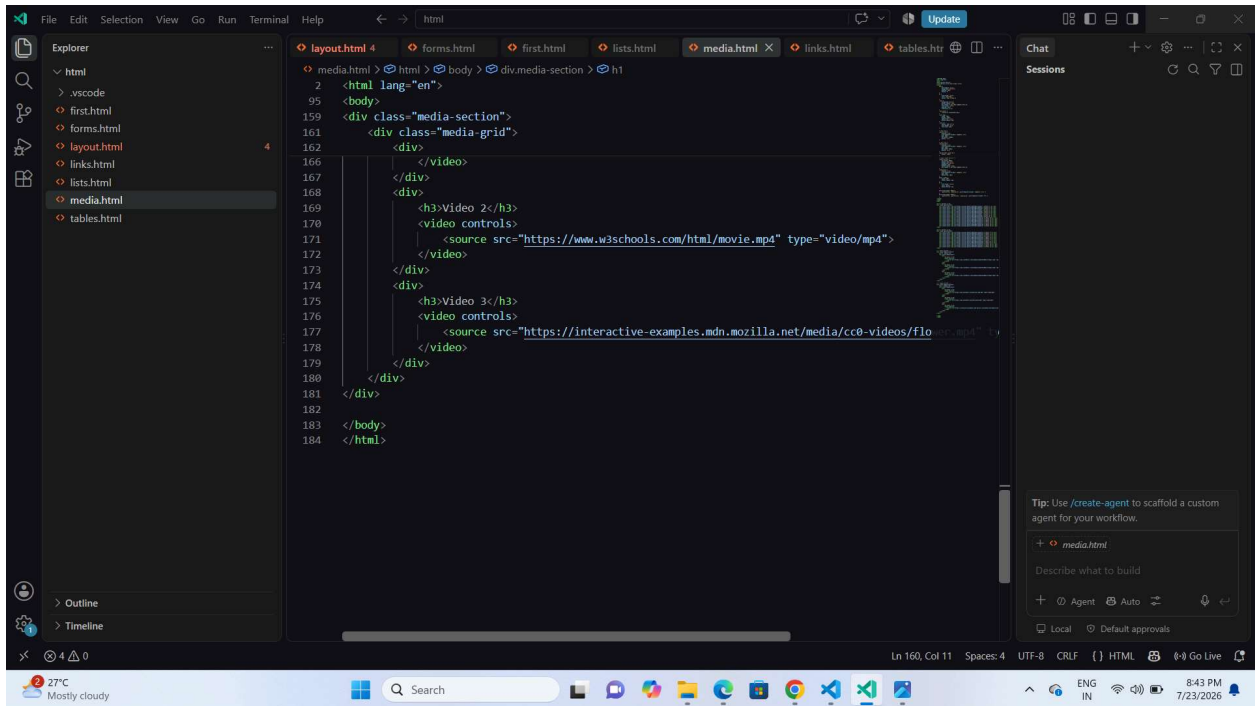

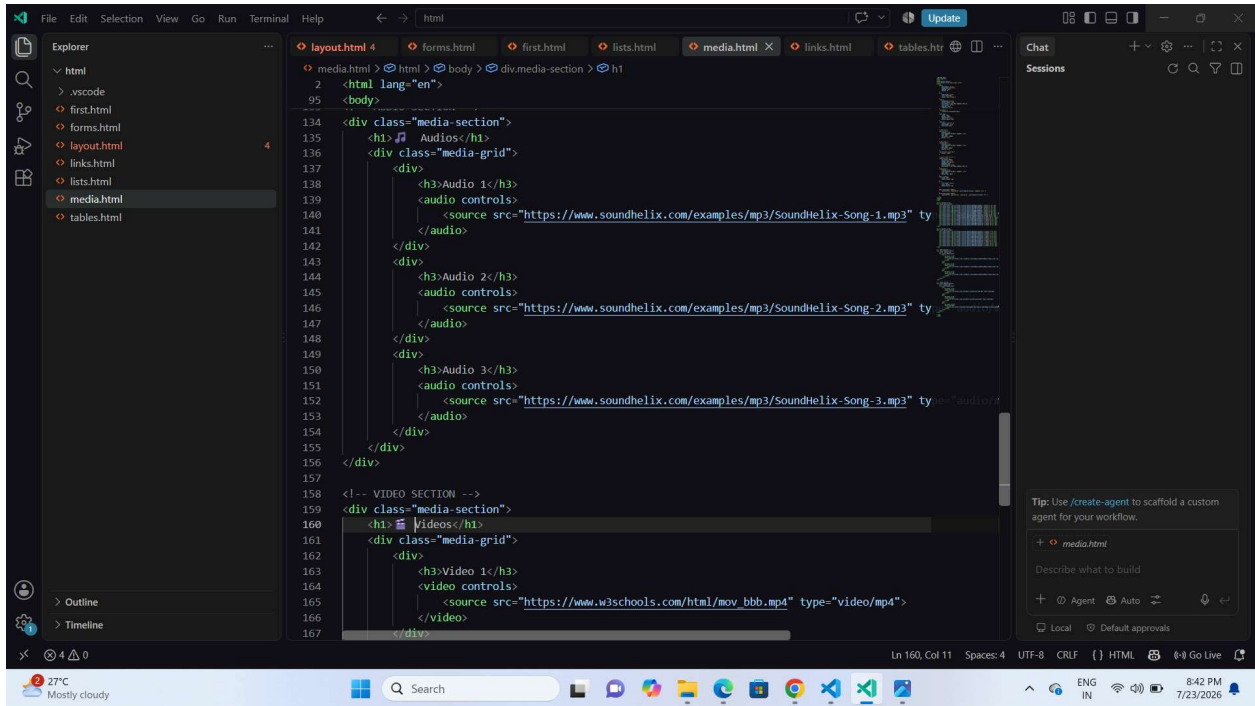

Multimedia has become an essential part of modern life. By combining text, images, audio, video, and animation, it makes communication more effective and engaging.

code:

```
1 <doctype html>
2 <html lang="en">
3 <head>
4 <meta charset="UTF-8">
5 <title>Gallery with Audio Video</title>
6 <style>
7   body {
8     font-family: Arial;
9     background: #f5f5f5;
10    padding: 20px;
11    margin: 0;
12  }
13  h1 {
14    text-align: center;

Task2:

Hyperlinks:

A hyperlink is a clickable text, image, or button that takes a user to another webpage, document, file, email address, or a specific section within the same page. Hyperlinks are an essential part of the World Wide Web because they connect related information and make navigation easy.

Types of Hyperlinks:

1. **Text Hyperlink** – Clickable text that leads to another page or document.
2. **Image Hyperlink** – An image that acts as a clickable link.
3. **Email Hyperlink** – Opens the default email application to send an email.
4. **Internal Hyperlink** – Links to another section within the same webpage or document.
5. **External Hyperlink** – Links to a different website or webpage.

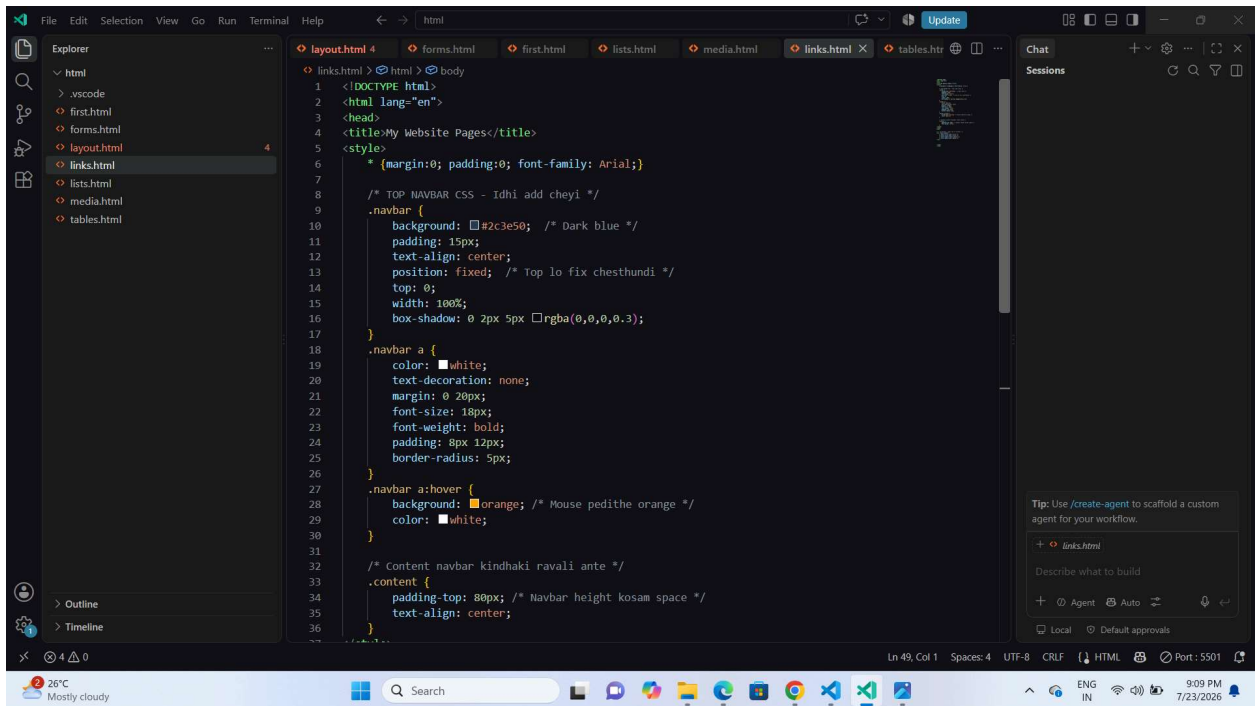

Advantages of Hyperlinks

- Easy navigation between web pages and documents.
- Quick access to related information.
- Improves user experience and saves time.
- Helps organize content effectively.

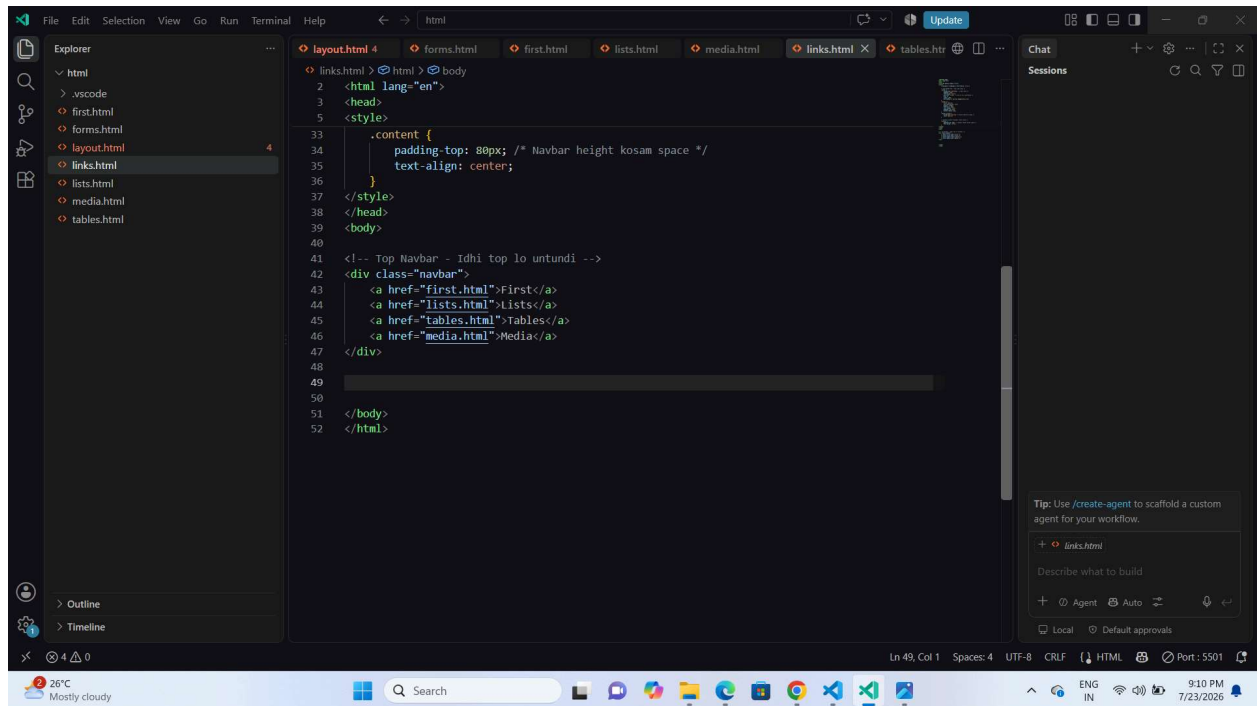

Conclusion

Hyperlinks are one of the fundamental features of the internet. They connect web pages and resources, making it simple for users to browse information, access documents, and navigate websites efficiently.

Code:

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4 <title>My Website Pages</title>
5 <style>
6     * {margin:0; padding:0; font-family: Arial;}
7
8     /* TOP NAVBAR CSS - Idhi add cheyl */
9     .navbar {
10         background: #2c3e50; /* Dark blue */
11         padding: 15px;
12         text-align: center;
13         position: fixed; /* Top lo fix chesthundi */
14         top: 0;
15         width: 100%;
16         box-shadow: 0 2px 5px rgba(0,0,0,0.3);
17     }
18     .navbar a {
19         color: white;
20         text-decoration: none;
21         margin: 0 20px;
22         font-size: 18px;
23         font-weight: bold;
24         padding: 8px 12px;
25         border-radius: 5px;
26     }
27     .navbar a:hover {
28         background: orange; /* Mouse pedithe orange */
29         color: white;
30     }
31
32     /* Content navbar kindhaki ravali ante */
33     .content {
34         padding-top: 80px; /* Navbar height kosam space */
35         text-align: center;
36     }
37 }
```

Task3:

Semantic Layouts:

A semantic layout is a way of designing a web page using HTML elements that clearly describe the purpose and meaning of different sections of the page. Instead of using generic `<div>` tags for everything, semantic elements make the structure easier to understand for developers, browsers, and search engines.

Common Semantic HTML Elements

- `<header>` – Contains the page or section heading.
- `<nav>` – Holds navigation links.
- `<main>` – Contains the main content of the page.
- `<section>` – Groups related content.
- `<article>` – Represents independent content, such as a blog post or news article.
- `<aside>` – Contains side content, such as advertisements or related links.

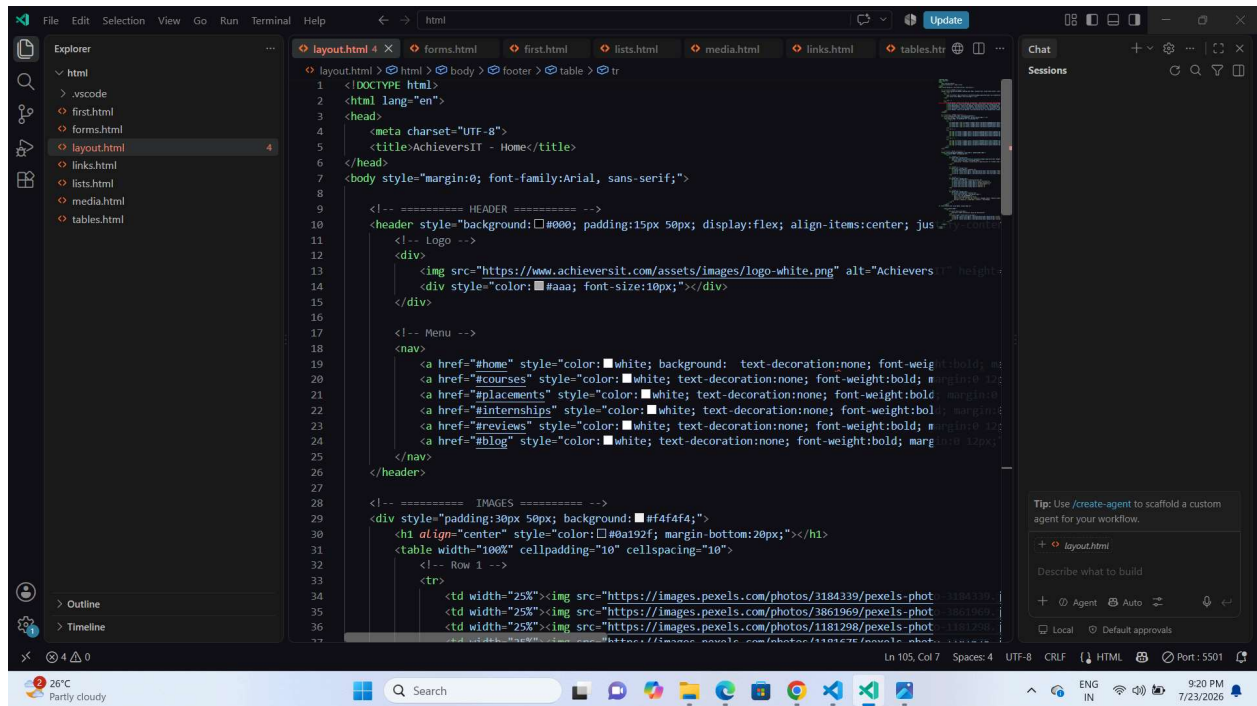

Advantages of Semantic Layouts

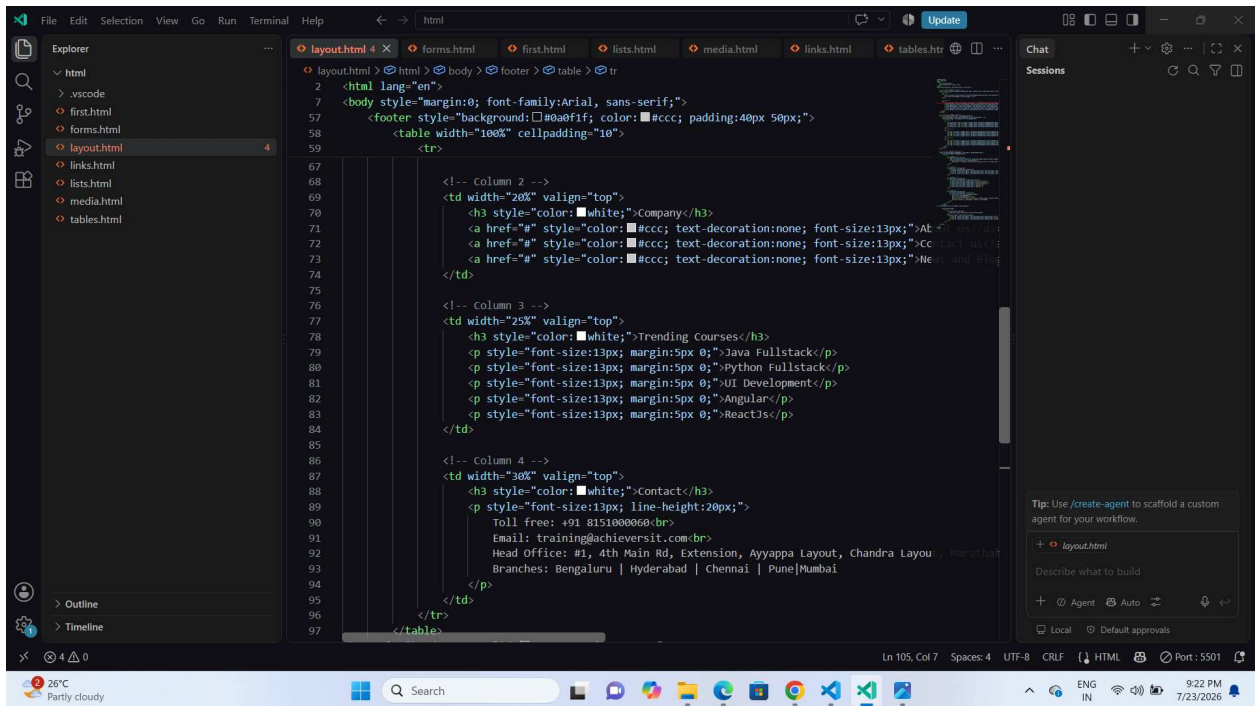

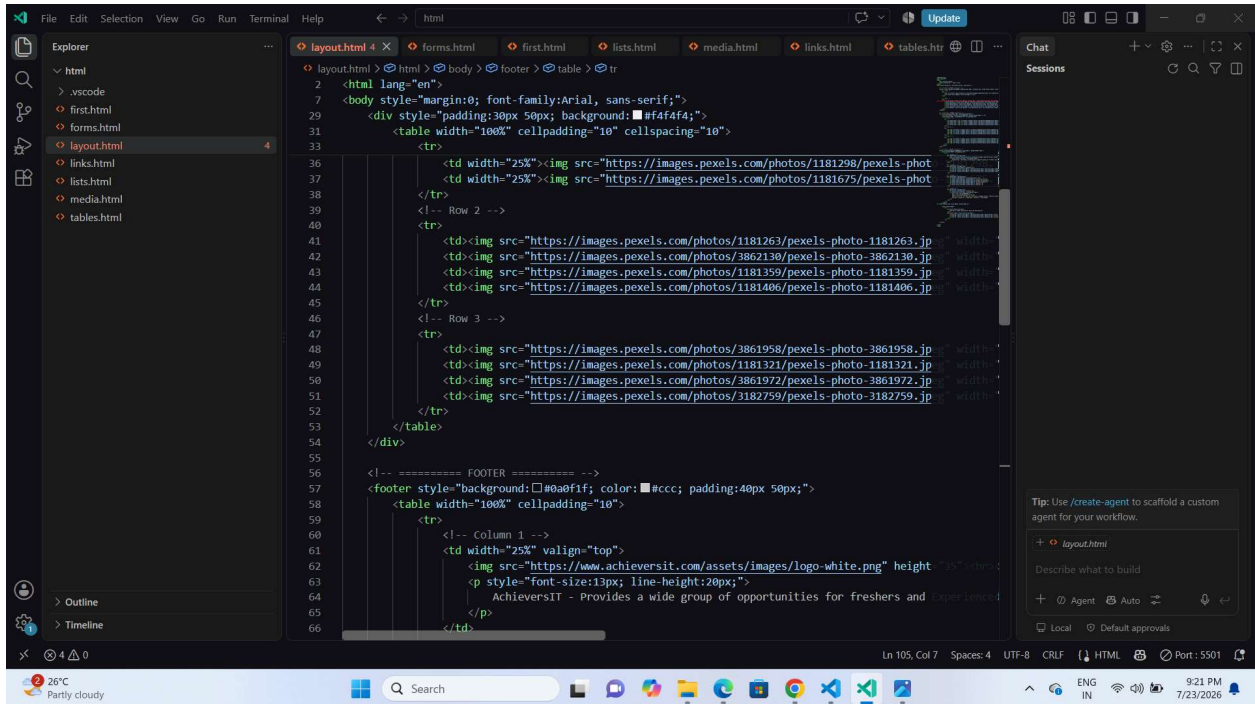

- Improves code readability and organization.
- Enhances accessibility for screen readers.
- Helps search engines understand the content (better SEO).
- Makes websites easier to maintain and update.

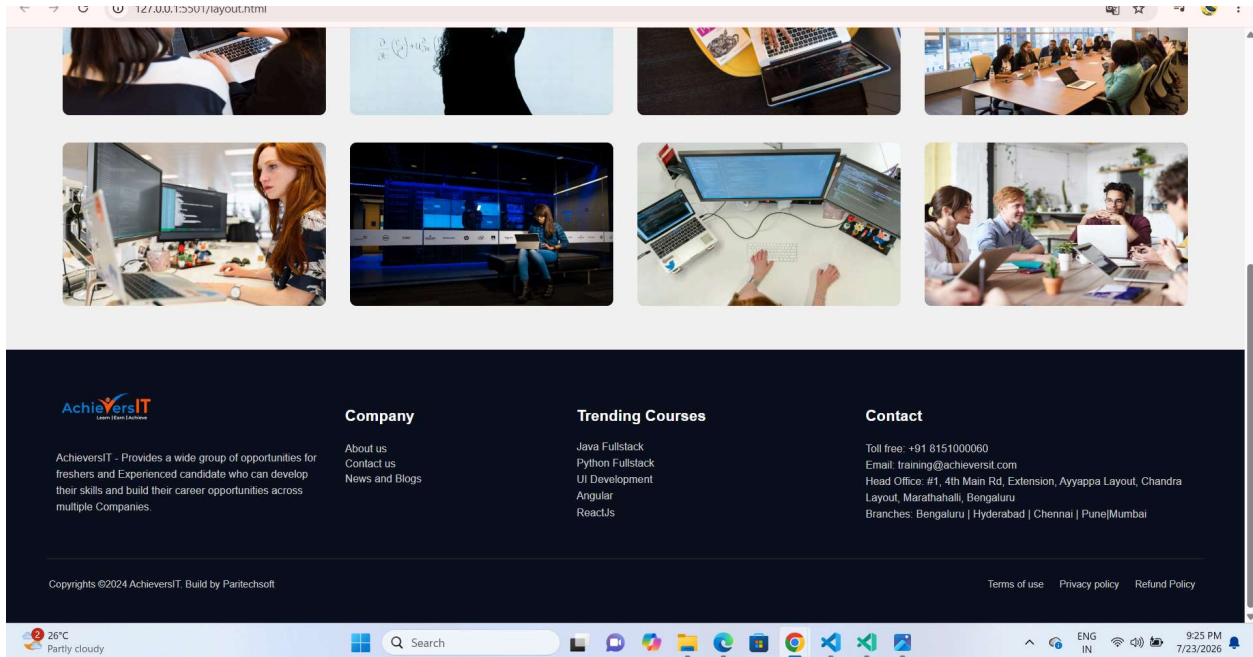

Conclusion

Semantic layouts use meaningful HTML elements to create well-structured web pages. They improve readability, accessibility, search engine optimization (SEO), and make websites easier to develop and maintain.

Code:

Task4: Forms:

A form is an HTML element used to collect information from users and send it to a web server for processing. Forms are commonly used for activities such as user registration, login, feedback, online shopping, and surveys.

The `<form>` tag is the main container for form elements. It can include various input controls such as text boxes, radio buttons, checkboxes, drop-down lists, buttons, and text areas.

Common Form Elements:

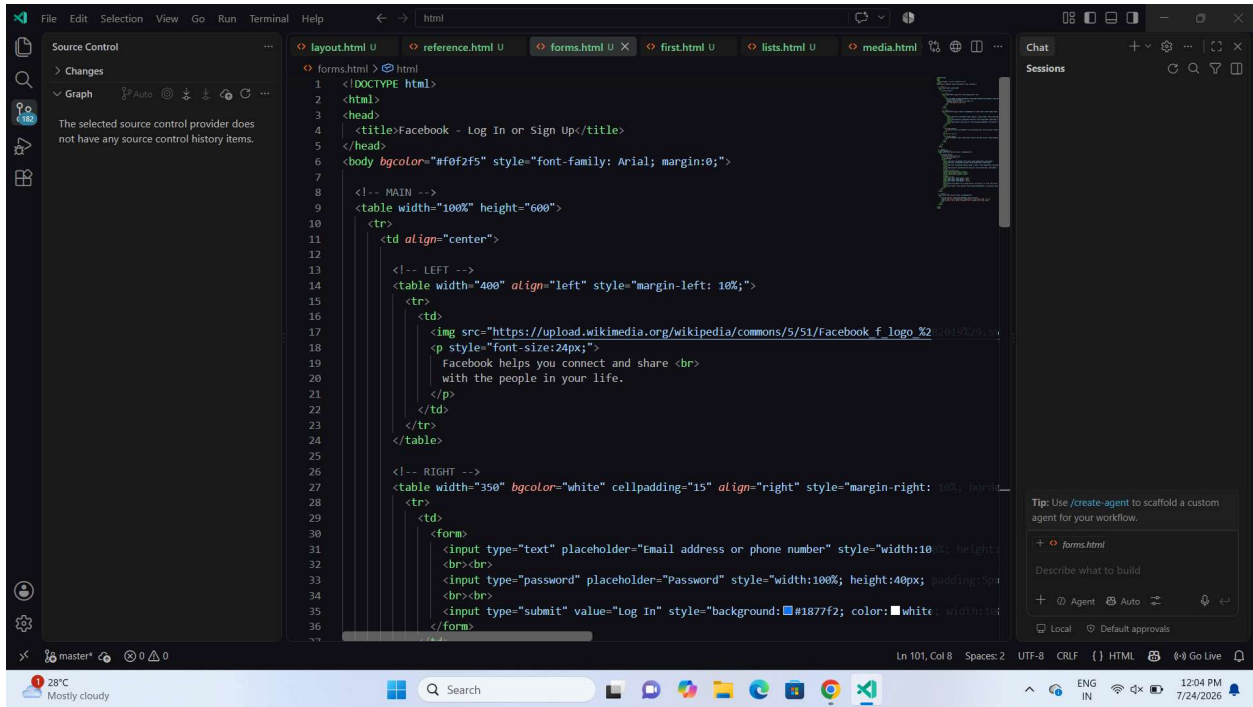

- **Text Field** (`<input type="text">`) – Accepts single-line text input.
- **Password Field** (`<input type="password">`) – Hides the entered characters.
- **Radio Button** (`<input type="radio">`) – Allows users to select one option from a group.
- **Checkbox** (`<input type="checkbox">`) – Allows users to select multiple options.
- **Drop-down List** (`<select>`) – Displays a list of options for selection.
- **Text Area** (`<textarea>`) – Accepts multi-line text input.
- **Submit Button** (`<input type="submit">`) – Sends the form data to the server.
- **Reset Button** (`<input type="reset">`) – Clears all entered form data.

Key Attributes of the `<form>` Tag:

- **action** – Specifies the URL where the form data is sent.
- **method** – Specifies how the data is sent (`GET` or `POST`).
- **name** – Assigns a name to the form.

- target - Specifies where to display the server's response.

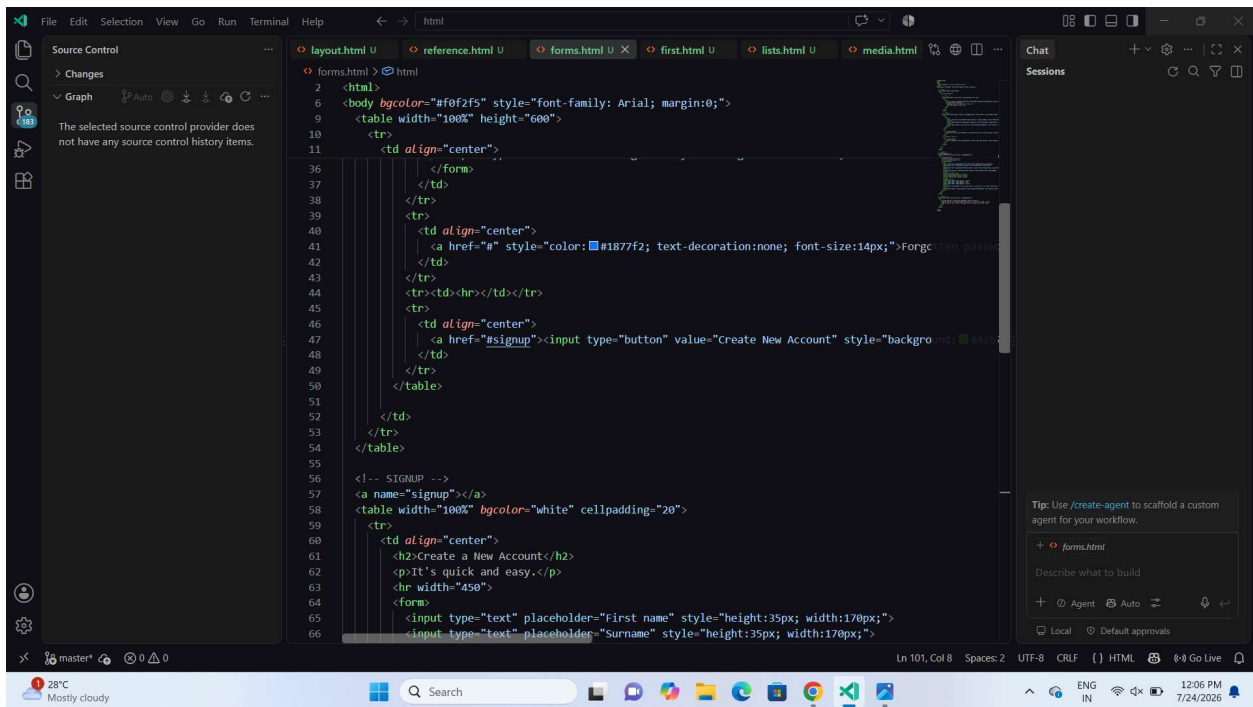

Code:

```
